## HOW TO REPLY TO THIS NOTICE:

I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

B. If the status above is to be removed, check box 5b on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and twice the amount of the ISSUE FEE shown above, or

**DETAILED ACTION**

***Continued Examination Under 37 CFR 1.114***

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 10/11/2012 has been entered.

Claims 3-5, 12-13, 19-20 and 22-23 are cancelled.

Claims 1-2, 6-11, 14-18, 21, 24-27 are pending.

***Allowable Subject Matter***

Claims 1-2, 6-11, 14-18, 21, 24-27 are allowed. The following is an examiner's statement of reasons for allowance:

Claim 1 is allowed since there is no prior teaches an auxiliary light source device for a reflective liquid crystal display device having a reflector, the auxiliary light source device comprising: a light directing member for directing incident light from the light source toward the reflector outwardly along an orthogonal direction, the light directing member including, an upper surface and a lower surface parallel to each other, the lower surface having a plurality of convex portions extending from the lower surface, each of the plurality of convex portions having a substantially planar surface which is

substantially parallel to the lower surface and a side surface connecting the substantially planar surface and the lower surface, and a side surface angle between the side surface of the each convex portion and a line perpendicular to the substantially planar surface is less than  $5^{\circ}$ , wherein the plurality of convex portions have the same side surface angle with each other, wherein light reflected along an orthogonal direction to the liquid crystal display device is uniform, wherein a ratio of the height to width of the plurality of convex portions is substantially about 1 to 2, and wherein a size of the plurality of convex portions increases with increasing distance from the light source; and a sidewall reflector surrounding the light directing member, and extending lower than the substantially planar surface of the plurality of convex portions.

Claims 6-9, 25 are allowed since they depend on the allowed claim 1.

Claim 10 is allowed since there is no prior art teaching a light directing member for directing incident light from the light source toward the display panel, the light directing member having an upper surface and a lower surface parallel to each other, the lower surface having a plurality of convex portions, each having a substantially planar surface which is substantially parallel to the lower surface and a side surface connecting the substantially planar surface and the lower surface, a side surface angle between the side surface of the each convex portion and a line perpendicular to the substantially planar surface being less than  $5^{\circ}$ , wherein the plurality of convex portions have the same side surface angle with each other, wherein light reflected along an orthogonal direction to the display panel is uniform, wherein a ratio of the height to width of the

plurality of convex portions is substantially about 1 to 2, and wherein a size of the plurality of convex portions increases with increasing distance from the light source, and a sidewall reflector surrounding the light directing member, and extending lower than the substantially planar surface of the plurality of convex portions; and a light reflecting member which guides light from the light source into the light directing member, said display panel being between said auxiliary light source and said light reflecting member.

Claims 10 and 26 are allowed since they depend on the allowed claim 10.

Claim 11 is allowed since there is no prior teaches the auxiliary light source device comprising: an upper reflective surface to reflect impinging light above a certain incidence angle; a lower reflective surface parallel to the upper reflective surface, the lower reflective surface having a plurality of convex portions extending toward the reflector to direct light from the auxiliary light source device to the reflector outwardly along an orthogonal direction; an entry surface connecting the upper and lower reflective surfaces through which light from a light source enters, wherein each convex portion includes a planar portion which is substantially parallel to the lower reflective surface and side surfaces connecting the planar portion with the lower reflective surface, and a side surface angle between the side surfaces and a line perpendicular to the planar portion is less than  $5^{\circ}$ , wherein the plurality of convex portions have the same side surface angle with each other, wherein light reflected along an orthogonal direction to the liquid crystal display device is uniform, wherein a ratio of the height to width of the plurality of convex portions is substantially about 1 to 2, and wherein a size of the

plurality of convex portions increases with increasing distance from the light source; and a sidewall reflector surrounding the auxiliary light source device, and extending lower than the planar portions of the plurality of convex portions.

Claims 14-18 and 27 are allowed since they depend on the allowed claim 11.

Claim 21 is allowed since there is no prior teaches the auxiliary light source device comprising a light directing device located above the reflector and adjacent to the light source to direct light from the light source to the reflector outwardly along an orthogonal direction such that a light distribution of light directed by the light directing device is substantially uniform along the length of the reflector, and such that the directed light is substantially perpendicular to the reflector, and the light directing device includes an upper surface, a lower surface parallel to the upper surface and a plurality of portions each extending from the lower surface toward the reflector at a 90° angle with respect to the lower or upper surface such that the light reflected outwardly along an orthogonal direction to the liquid crystal display device is uniform, wherein each portion includes a planar surface which is substantially parallel to the lower surface, wherein a ratio of the height to width of the portions is substantially about 1 to 2, and wherein a size of the plurality of portions increases with increasing distance from the light source; and a sidewall reflector surrounding the light directing device, and extending lower than the planar surfaces of the plurality of portions.

Claim 24 is allowed since they depend on the allowed claim 21.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
